ABSTRACT

A unitary drain waste and vent pipe bushing for reducing the size of polyvinyl chloride (PVC) pipe. The annular body of the pipe bushing has an inner diameter sized to accomodate the end of the smaller-diameter pipe, with an inwardly-projecting stop at the lower end of the pipe bushing. The body of the pipe bushing has an outer diameter sized to fit inside the end of the larger-diameter pipe, with an outwardly-projecting flange at the upper end of the pipe bushing. The pipe bushing allows a plumber to connect the two pipes with only two glue joints instead of three. Because the pipe bushing is disposed inside the end of the larger-diameter pipe, the resulting joint is less bulky than a joint made with the presently-used coupling and insert.
